HOW TO GROW BEAUTIFUL HYACINTHS

IN THE OPEN GROUND

Plant in the fall 6 inches apart each way and 3 to 4 inches deep. Give them slight protection over winter, and in the spring, after the flowers are gone, the bulbs may be removed in time to set your summer flowering plants.

IN POTS OR WINDOW BOXES

Plant bulb in the pot so that its crown just shows, then set away in a cool, dark place for six weeks or two months for root-growth to develop. After this, bring gradually to the light, heat and air; give plenty of water.

IN GLASSES

Set the bulb so that the lower end merely touches the water. Put away in a cool, dark place till you see the roots developed, then remove by degrees to full light and air. A piece of charcoal in the water will keep it sweet.

GARDEN CULTURE FOR HARDY BULBS

To secure early fine flowers outdoor planting should be done early in fall, though, generally speaking, from October to November is the most desirable time. Most bulbs succeed in any well-drained, good garden soil, which, however, should be dug about 18 inches deep. Hardy bulbs throw out their roots during fall and winter. They usually root deeply, therefore, bulbs should be planted from 3 to 4 inches below surface, so as to be as free as possible from the upper crust of the soil, which leaves

considerably, caused by the alternate freezing and thawing, thus causing bulbs planted too near the surface to break down their roots. A little sand placed below and around bulbs permits water to drain off in heavy soils. Beds should be in a sunny position, if possible, and protected during winter by a coating of rotted manure. Bulbs may be taken up and dried off as soon as leaves acquire yellow color; beds will be vacant in time for ordinary bedding plants. If it is found necessary to remove bulbs immediately after flowering they should be carefully taken up, the leaves and roots damaged as little as possible, and "heeled in" in some slightly shaded place until the foliage is quite withered and bulbs thoroughly ripened, when they may be taken up, cleaned, and stored in a cold, dry shed or cellar until wanted for the next fall's planting.

WHEN TO ORDER—We shall be prepared to fill orders with a few exceptions, from this Catalogue about September 15, and while planting may be done as late as December, we earnestly advise our patrons to order and plant in September or October, as it is the best time.

14 Best Single Named Hyacinths

PRICE, 10c. EACH; ANY 6 FOR 50c.; ANY 12 OF ANY KIND FOR \$1.00,
BY MAIL OR EXPRESS, PREPAID.

For winter and early spring flowering nothing surpasses the Hyacinth. It is sure to bloom and give satisfaction in the house during winter, or in the garden in early spring. Its large spikes resemble nothing in cultivation. Rather than offer a large confusing list of varieties, we have selected fourteen each of Singles and Doubles, embracing all the shades of this flower, each one being the largest, strongest and best of its color.

All Single Hyacinths succeed well in glasses and when forced. We consider the Single Hyacinth more useful and valuable than the Double varieties. They are better for forcing, more vigorous in growth, and produce stronger spikes of bloom, which are generally of better substance and are, at least, as beautiful as those of the Double sort.

HERMAN—Yellow, early, a splendid sort.

LA FRANCHISE—Lovely bluish-white, very large bells.

GRANDEUR A MERVILLE—Finest cream-white, large spike.

READ THIS PAGE CAREFULLY FOR BEDDING HYACINTHS MIXED AND UNDER COLOR

Our "Rainbow" Collection of Hyacinths

A Photograph of Our Mixed Hyacinths.

These Mixed Hyacinths are used almost exclusively for bedding out in the fall, on account of their cheapness. They are just as good colors and just as fragrant as the named varieties; the difference is in the cost of keeping the named sorts separate, both while planting and after they are dug. The exact shades cannot be given, but the general outline of colors are kept separate, so that in ordering you know what color you are buying.

GRAPE HYACINTH

This charming little gem should be found in every garden in abundance. It has been termed the "Blue Lily of the Valley," and when planted in a mass with that sweet flower it does resemble it, and forms a most fascinating combination.

BLUE—Price, three for 5c; 20c per dozen.

WHITE—Price, three for 5c; 25c per dozen.

FEATHERED HYACINTH

Of this elegant Hyacinth the spike of bloom resembles a feathery plume, and is of fine blue color. The bloom first appears as a tassel about an inch or two long, of a rich blue color, but as it expands is marked with pink, and at the end of two months is developed into a beautiful plume six inches in length, of exquisite coloring, pink, violet and blue. Desirable for both house and garden. The bulbs rapidly increase and are perfectly hardy. Price, 3c each; 6 for 15c; 12 for 25c.

The points of merit that commend this family of Hyacinths to us are many. First, they are early—can be brought into bloom for the holidays, a season when flowers are scarce. Second, they throw up several large spikes of bloom to the bulb. Third, they are so easy of culture, once planted they take care of themselves. Try a set. They can be planted at intervals of two or three weeks apart, and you have flowers all through the winter.

SINGLE WHITE—Has elegant waxy white bells of great beauty and fragrance.

SINGLE BLUE—Lovely light blue, a fine contrast to the white variety.

The bulbs we offer are twelve centimeters and over in circumference and must not be confounded with smaller unnamed sorts.

Choice Early Flowering Tulips

Tulips are such universal favorites that it is scarcely necessary to say much upon their merits here. Their ease of culture, combined with beauty of form and gorgeous coloring, render them the most popular bulbs grown for spring bedding, and for winter flowering in the greenhouse and window gardens they are incomparable. The Tulip is extremely hardy and of easy culture, flowering as freely in the shade as in the sunshine, and producing as fine flowers in a confined town garden as in a more favored place. Double and Single Tulips, when associated together and planted in front of shrubs,

maintain a longer display than if either are separately planted. In gardens where the flower beds must be kept gay from the earliest day of spring. Plant them between the lines of Tulips, Scilla Sibirica, Chionodoxa Lucillae, Snowdrops or Crocus, and as these flower first they can be removed or cut down when the Tulip is coming into bloom. The Single Tulip has a greater variety of rich, delicate and attractive colors than any other section of spring flowering bulbs. The Single Tulip is extensively grown for indoor decoration, three or five bulbs in a pot.

They differ from the early Single Tulips by their taller growth and later bloom; planted in conjunction with early Tulips, a gorgeous display of bloom can be enjoyed until late in May. Brilliant in the extreme for bedding. Flowers are large, symmetrically formed, and their magnificent colors, interesting and delicate featherings and markings, are a sight not soon forgotten. Hardy, and do well through all sorts of weather.

MACROSPILA—Red; very fine for bedding.

ISABELLA (Blushing Bride)—Opens creamy-white with crimson-rose border, turns rosy-pink, never looks faded, color keeps changing all the time; flower of immense size, largely used for outside, but can be forced by middle of February. This is one of the most useful Tulips.

GOLDEN CROWN—Like Gesneriana, except its grand blossoms are of a fine yellow color, banded with bright red.

SPRING

NOTE—We wish to say to our friends that the different varieties of *Narcissus* force into bloom in the house during winter as readily as the *Hyacinths*. There is nothing finer in the flower line for this purpose; indeed, they are our choice of all winter-flowering bulbs—they are so graceful and pretty. We can especially recommend for house culture the varieties preceded by a star (*). All *Narcissus* and *Jonquils* are hardy except the *Polyanthus* varieties and Chinese Sacred *Narcissus*, and these are hardy in the North protected by a covering of manure.

LILIES FOR FALL PLANTING

All herbaceous borders should have a few Lilies scattered through them. The sorts offered below can be planted with excellent results during the early spring months. It is in the hardy border that Lilies do best, as they get the benefit of the shade of the surrounding plants, which is so necessary for their welfare; other varieties should be planted in the autumn, and are offered in our autumn catalogue.

The soil for Lilies should be moderately rich, fairly light and well drained. Water should not be allowed to stand about the bulbs or plants during winter or early spring. Plant September to April. Spade the soil well; make a base of well rotted manure six inches below the surface, cover the soil and plant bulbs so they will be just under the surface. Do not let bulbs touch the manure.

LILY OF THE VALLEY

These beautiful, fairy-like Lilies delight all. Choose a partially shaded place in the garden and plant the roots about six inches apart and two inches deep. For winter blooming, pot in December and place outside in a shady place, allow them to freeze once or twice, then bring them into the house, where they can be forced into bloom in a short time. If you wish them for Easter start them in February. Price, choice pips, 5c each; 35c per dozen.

Please Notice—Our importation of Lily of the Valley will arrive about the middle of November, which is as early as they are received in this country.

DECORATIVE FERNS

The Original Boston Fern

(*Nephrolepis Exaltata Bostoniensis*)—It is a rapid grower of very easy culture, soon forming a large, graceful plant; its beautiful fronds often attaining a length of five to six feet, which arch and droop gracefully. **Nice young plants, 15c each; larger plants, 25c and 50c each, postpaid.**

Springfieldii

The fronds grow stiffly erect in the most luxuriant manner, giving it a feathery appearance. New fronds are constantly developing and are a rich, dark green, and remain so. It will thrive and grow in any good, light garden loam. **Price, 15c each; 2 for 25c. Fine large plants, 30c each.**

Nephrolepis Scotti

Much dwarfier and bushier growth than the Boston Fern. The fronds droop gracefully, and are not as long and coarse as the Boston. To see it in all stages of growth from a runner in the bench to a 14-inch pot specimen will convince you that it will be in great demand as a house Fern. **Price, strong plants, 15c each; 2 for 25c. Nice 3-inch pot plants, 20c each; large plants, 35c each.**

The Boston Drooping Fern

(*Nephrolepis Bostoniensis*)—Much has been heard of this Fern during the past year; of the same form as the Sword Fern, *Nephrolepis Exaltata*, but has larger and broader fronds. In well grown specimens the fronds attain a height of 6 to 7 feet. Fine for hanging pots and baskets. **Price, 15c each; 2 for 25c. Large plants, 25c each; extra fine plants, 35c.**

New Fern,

Nephrolepis Whitmanii Compacta

Identical with *Whitmanii* except more dwarf, fronds are much larger and broader and fluffy on both sides. Indeed a handsome plant. **Price, 15c each. Large specimen plants out of 4-inch pots, 35c each.**

N. B.—We can make up some extra nice specimen plants of either one of the above by placing three or four in a 7 or 8-inch pot, and send in a pot for \$1.00 by express, at your expense.

Nephrolepis Scholzei

(*The Plumed Scotti Fern*)—Holding the same position to all other plumed varieties that *Scotti* holds to the old Boston. It is a sport from *Scotti*, possessing all the merits of that most popular variety, but with the pinnae subdivided, giving it an airy, feathery appearance. **Price, nicely shaped plants, 15c, 25c and 40c each, postpaid.**

Nephrolepis Superbissima

New. A unique variety, different from all others and really in a class by itself. It makes a dwarf, compact growth, the fronds being very dense, firm and rigid, and of a deep green color. **Young plants, 20c each; 3 for 50c; 4-inch, 40c.**

Nephrolepis Whitmanii.

Baby's Breath

(*The Wonderful New Fern, Nephrolepis Amerpohlil*)—Newest and grandest of all Ferns, so delicately fine and fluffy in foliage that it has been given various names, among them "Baby's Breath," indicating that its fronds are so very fine and delicate that a baby's breath would set them in motion. No Ostrich Plume can compare with it in fluffiness. **Price, 15c. Fine specimen plants, 35c, 50c.**

Nephrolepis Whitmanii

(*One of the finest Ferns yet introduced*)—The best Fern of the Boston type yet introduced, but much more compact and shorter in its growth. **Fine young plants, 15c each; 3 for 40c. Strong, 4-inch pot plants, 35c each; extra fine specimen plants, 50c each.**

The New Fern "Roosevelt"

Introduced as "*The Greatest Fern of the Age*"—In general characteristics it resembles the Boston Fern, but with two points of great excellence over that variety. First, it produces many more fronds, making it a bushier and handsomer plant; then the pinnae are undulated, giving it a pronounced wavy effect seen in no other Fern. It is highly recommended. **Fine young plants, 15c, 35c and 50c.**

The Grand New Dwarf Roosevelt Fern "Teddy Junior"

(*The Fern for Every Household*)—The fronds are broad and beautifully tapered from base to tip; they droop just enough to make a shapely, graceful plant. "Teddy" will produce about four times more fronds than any other Fern ever introduced. A plant of rare beauty and perfection in the average dwelling house without special care or attention. As a table decoration, Fern growers can appreciate the commercial value of a dwarf variety that will produce forty to fifty fronds twelve to fifteen inches long in a four-inch pot. **Young plants, 15c; 3-in. pots, 25c; strong plants, 50c; extra strong plants, 75c.**

The "Baby's Breath Fern"

(*Nephrolepis Goodii*)—This has the finest foliage of all the Ferns. It is so delicate that a lady on seeing it exclaimed, "Call it the Baby's Breath Fern, as it is so dainty in texture that a baby's breath would set its fluffy foliage in motion." The fronds are very fine and filmy, on which account it has been called by some the Lace Fern. It is an improved variety and the best of its type. Nothing is daintier or more exquisite than well-grown specimens in any size. Our reputation for it that no Fern in existence can compare with "Baby's Breath" in fluffiness. **Fine young plants, 15c; strong plants, 35c.**

Teddy Junior.

Our Ferns are going to be extra fine this fall, and there is nothing you can buy in the fall that will give you better results and that will give you more pleasure for the same amount of money as Ferns.

This class of plants is deservedly popular. They are suitable for pot culture in the window or the outdoor plant stand. During the greater portion of the year the plants are, in the different varieties, covered with a profusion of graceful, drooping racemes of pink, white, crimson and bi-colored buds and blossoms that are exceedingly attractive, and having a waxy, coral-like appearance. The plants themselves are of neat, compact habit, with glossy green leaves in some varieties and exquisitely cut ones in others.

Alba Perfecta Grandiflora Closely resembles *Begonia Rubra* in foliage and growth; with beautiful pure white blossoms.

Begonia Alba Picta Long, slender lance-shaped leaves on short stems, thickly studded with silvery-white. White flowers.

Begonia Gracilis Luminosa (Red)—The latest novelty in the *Begonia* family. Strong and robust. The most free-flowering of all *Begonias*, always in bloom—spring, winter and autumn. The flowers, when first opening, are a bright cherry, changing to a clear coral-red. Its foliage is rich glossy green, often shaded deep bronze.

Begonia Gracilis Alba (White)—Resembles *Luminosa* in every particular except in color, which is pure white, sometimes tinted delicate pink. It is an exceptionally strong, robust grower and a true ever bloomer. A splendid bedder and a grand pot plant.

Pink Rubra If you have only one *Begonia*, let it be a pink *Rubra*. It is so fast growing that it will in a year or two reach to your window, sending up heavy stiff canes an inch in diameter, and rising beside them will grow strong, slender branches, gracefully drooping under heavy waxen silver spotted leaves and pendent panicles of pink colored flowers as large as a hand. (See photograph on this page.)

Price, 15c each, except where noted; any two for 25c; strong, two-year-old, out of 4-inch pots, 35c each; any three for \$1.00.

FRANCIS SCOTT KEY—(The Ideal Garden Rose.) (T.) In describing this Rose we might say it is large and very large. Some of the flowers have as high as sixty petals and sometimes more, opening to a very high center. In color it is a most magnificent red. It is very easy to cultivate and requires little or no care. This makes an ideal Rose for your garden, and is extremely showy when a number of these plants are massed together. **One-year-old, 20c; two-year-old, 40c.**

MRS. AARON WARD—(H. T.) This Rose is a real joy to the grower and absolutely distinct. Has a color that catches the eye at once. Coppery-orange in the open bud, golden-orange when partly developed, pinkish-fawn of lovely shade when fully open, when it looks like a full fluffy-silk rosette. No wonder everybody that sees it falls in love with it; one of the most beautiful Roses in existence.

MRS. WALTER EASLEA—(H. T.) Glowing crimson-carmine; lovely.

MRS. CHAS. RUSSELL—(H. T.) This wonderful new American Rose has taken the country by storm; no other forcing Rose except American Beauty can compete with it when it comes to counting points. A bunch of three dozen blooms carried perfectly from Boston to Springfield; stems three feet long, stiff and surmounted by grand rosy-pink blooms of the largest size and build. **One-year-old, 25c; two-year-old, 50c.**

NITA WELDON—(T.) Ivory-white with the edges of each petal tinted faintest blush. It has more delightful phases of beauty in its several stages, from the bud to the fully developed flower; the flowers which are produced in marvelous profusion are of large size, very full, and of globular form, the buds being long and pointed, vigorous growth and perfect habit. Awarded the gold medal of N. R. S. **One-year-old, 20c; two-year-old, 40c.**

NERISSA—(H. T.) An enormously large, full flower, of fine shape, of a creamy-yellow color, the center being tinted with peach. **Price, 20c each.**

POLLAERT ROSE—(H. T.) This is the much-heralded improved La France. The claims made for it are that it is a stronger grower, and that the fragrance is more pronounced.

PRESIDENT TAFT—(The Remarkable Pink Rose.)—(H. T.) This Rose was raised in Cincinnati, the home of President Taft. All will admire this Rose. It is without question the most remarkable of all pink Roses. It has a shining intense, deep pink color possessed by no other Rose. It is a fine grower, free bloomer, good size and form, fragrant and in a class by itself as to color. Do not confound this Rose with Leuchtheuer which some have attempted to rename President Taft.

ROBIN HOOD—(H. T.) This new Rose has a glorious rosy-scarlet color that is at once soft and bright and lasting; the bloom is full and of the beautiful build of the H. P.'s. It is a grand grower, heavy caned and profuse in foliage; flowers very freely produced; we feel sure this will prove a delightful companion for Gen. McArthur and Rhea Reid.

SENATOR MASCURAND—("The Yellowest of all Roses.")—(H. T.) This is our pick of all the yellow Hybrid Tea Roses; it is a good grower, very free bloomer; flowers are large, full and globular; color deep orange-yellow, lighter on the edge of the petals. This is a much better garden Rose than Mrs. Aaron Ward. When we say orange-yellow, we do not mean lemon-yellow; it is the yellowest of all Roses.

SUNBURST—This magnificent giant yellow Rose is a fine forcer; it stands head and shoulders above all others of its color and will rank with American Beauty and the Killarneys in value

A Vase of J. L. Mock Roses.

and grandeur. It has long, pointed buds, which can be cut tight for market. The color is orange-copper or golden-orange and golden-yellow; edge of petals lighter; all intense shades, extremely brilliant in effect. Belongs in the class of big Roses; has created a sensation wherever shown.

NATALIE BOTTNER—(H. T.) Pure white and is said to even excel Druschki. The shape of the flower is similar to Kaiserin Augusta Victoria and the blooms are borne on long, strong stems. **One-year-old, 20c; two-year-old, 40c.**

MAY KENYON SLANEY—In color a charming blush-pink on a rich cream ground, the pink intensifying as the flower expands; vigorous habit, flowers large and delightfully tea-scented. **One-year-old, 20c.**

MY MARYLAND—(Summer blooming, hardy with protection.) Does remarkably well outdoors. Large, full, double flowers, a pleasing shade of salmon-pink. Distinct and beautiful. **One-year-old plants, 20c each; two-year-old plants, 40c each.**

The blooms, which are produced with the greatest freedom, are carried on stiff and erect stems, and are of large size, perfect formation and highly perfumed. Growth is vigorous and free. We can confidently recommend this sterling novelty as a most valuable addition. **One-year-old, 20c; two-year-old, 40c.**

Especially desirable for the South. We have a grand stock of this variety in three sizes. The flowers, when open, run four inches and over in diameter—borne constantly from the time the sun shines in the spring until late in the autumn. Plant quantities of these lovely flowers and cut them with a lavish hand, for every flower you pick, two will come to fill its place. For the largest and finest blossoms, dig a trench six inches deep, put in two inches of rotten manure, a little earth and sow the seed over this three inches apart in the row, covering an inch and a half. Do this during the month of November or just before freezing weather, and as the plants grow, fill up the trench around them with rich earth. Such planting will produce enormous quantities of flowers of the largest size. **Best mixtures of Spencer type Sweet Peas, 5c per packet; 15c per ounce.**

STRAWBERRIES

From September 1 until October 15 is a very good time to set out Strawberries. Try a few and you will want more. They are cheap and easy to grow.

Strawberries will succeed in any soil that is adapted to ordinary farm or garden crops. Soil should be thoroughly prepared to a good depth, well drained and enriched. Vegetable manure (muck, rotten turf, wood soil, ashes, etc.) is the best. For field culture, wood soil, ashes, etc., is the best. For field in rows; for garden 15 inches apart each way, leaving pathway every third row. To produce fine large fruit, keep in hills, pinching runners off as soon as they appear. Ground should always be kept clean and well cultivated. In winter a covering of leaves, straw or some kind of litter will protect the plants. Do not cover them until ground is frozen or so deep as to smother the plants, and remove covering before growth starts in spring. Mulching will keep the fruit clean and the soil in good condition through the fruiting season. The blossoms of those varieties marked with (P) are destitute of stamens and are termed pistillate, and unless a row of perfect flowering variety is planted at intervals not exceeding about a rod, they will produce imperfect fruit and but little of it, but when properly fertilized, as a rule they are more prolific than those with perfect flowers.

Dip the plants in water as soon as received and bury the roots in moist, shady ground until you are ready to set them out; neglect for an hour or so is often fatal.
